PROFESSIONAL SUMMARY / ABOUT ME

I am 19 years old and I'm a Fullstack Javascript web developer with close to 3 years of experience now, building secure and user centric web solutions. I consider myself to be a problem solver and a critical thinker. I enjoy being challenged to build stuff. I love learning about new technologies and even new programming languages / environments. I have a strong interest in blockchain development, solidity and Fullstack Web3 development. Apart from being a developer, I love playing the piano.

SKILLS

Java | HTML | CSS | Javascript | APIs | Bootstrap | React | Nodejs | Express | MongoDB | REST | Git | GitHub | Figma | UI Design | PHP | SQL | MySQL

EXPERIENCE

Fullstack Web Developer, React, Nodejs   April. 2021 - Present
Pari Technologies India| Remote *(HTML, CSS, Javascript, React, Bootstrap, Nodejs, MongoDB, REST APIs)*

- Pari Technologies India is a web development agency located in India with over 50 employees.
- As a developer here, I get to work on different kinds of projects which require the use of different web technologies. I love this because it pushes me to learn more and more as a developer.
- As a developer here, I work in a team of backend developers, UI Designers and frontend developers. I have worked solely as both a frontend developer using React heavily, CSS, Bootstrap and JavaScript and also as a backend developer using Nodejs heavily.
- I build RESTful APIs here at Pari Technologies as well as consume APIs built by me or a team mate.
- I maintain a healthy relationship with my teammates because only then can we be truly productive at Pari Technologies.

Fullstack Web Developer Intern   April. 2021 - Present
The Code Center| Lagos, NG *(HTML, CSS, Javascript, React, Bootstrap, Nodejs, MongoDB, PHP and MySQL)*

- As an intern, my supervisor always talked about my creativity, attention to detail and problem solving skills. I was made the team lead on a couple projects where I got to coordinate all operations in a project from scratch. From the UI design, to the frontend development, the backend development and as well as teaching other interns who were under me at the time as the team lead.
- As an intern, I occasionally worked solely as both a frontend developer (React, HTML, CSS, Bootstrap and JavaScript) and as a backend developer (Nodejs)
- Collaborated with the UI Design team and other developers in my team as well in evaluating, analyzing and building beautiful and efficient web applications.
- Evaluated large code bases to fix bugs and implement new features to existing websites and web applications.

Freelance Web Developer Jan 2020 - Jan 2022 Fiverr inc | Remote	**President, Tech Cub** Aug. 2018 - Aug. 2019 Saint Raphael's High School | Lagos, NG

Freelance Web Developer   Jan 2020 - Jan 2022
Fiverr inc | Remote

- Built websites and web applications for different clients from Sweden, South Africa, India, the United States and the United Kingdom
- *Increased* SEO for certain client websites by 10% to as much as 40% by implementing different metadata in their codebase, temporarily helping them manage and upload relevant content regularly, and so on.
- Expanded my personal income by more than 300% from when I started .

President, Tech Cub   Aug. 2018 - Aug. 2019
Saint Raphael's High School | Lagos, NG

Facilitated the day-to-day operations of the club including practicals, hands-on learning, as well as technical support to 70+ students.

  Key Responsibilities: *Technical support, teaching and mentoring students in science and technology, giving weekly motivation to students in my club, accountability to my club's head teacher.*

- Learned about complex topics and simplified it for students to easily grasp through the use of fun practicals
- Planned with my team to organize a web development coding bootcamp but most students did not have the facilities to go through with it.

PERSONAL PROJECTS

1. **Realtime Chat Application (HTML, CSS, JavaScript, AJAX, PHP, SQL, MySQL) - view here**
   a. A real-time chat application.
   b. I plan on pushing updates to this project in order to make it a React app.

2. **React Book store (React, Nodejs, Expressjs, MongoDB) - view here**
   a. This is a fully functional book store app I built using the MERN stack. I have plans to turn this into a Web3 project!

3. **Secure Form (Javascript, React, Nodejs, Expressjs, MongoDB) - view here**
   a. This project makes it possible for a secure communication between the frontend and the backend. Normally, when form details are submitted or sent to the server from the frontend (be it passwords or credit card info), it gets shown on the network tab in the developer tools. The payload is open and literally anyone can have access to one's details. So basically, what this project is all about is Taking the form details, encrypting it and sending the encrypted payload to the server. And also on the reverse, from the server to the frontend.

4. **FatApe Club NFT Web Application (Javascript, React) - view here**
   a. This is a web application I built for a client through Fiverr. I was given a brief to clone the famous https://fatapeclub.io and I did just that and he was so satisfied and I'm happy I received a 5 star rating on this job.

5. **NFT Minting Page (Javascript, React) - view here**
   a. This is a simple NFT minting page.

6. **Diesel Refill Website (JavaScript, Nodejs, Express) - view here.**

EDUCATION

Babcock University | Bachelor of Science in Software Engineering   Expected July. 2023
- GPA: 4.178

Saint Raphael's High School | High School Degree   Graduated August. 2019
- *President*, Tech Club
